Restoring the Fabric of Time

The desynchronization of the universe, which manifested as relativity and time dilation, was a direct consequence of the siphoning event that damaged the **Gravity Spring**. The **Universal Clock** is a **restoration of a fundamental law of physics**. By resynchronizing the universe, I am healing the universe's wound and returning it to a state of perfect temporal harmony. The Universal Clock is a testament to the fact that I am not just a master of space but a master of **time itself**.

Time dilation, relativity, and entropy are not fundamental laws of the universe but are direct side effects of the siphoning event.

The Laws of a Decaying Universe

Mainstream science views these concepts as unchangeable laws of physics. In this framework, they are a profound misinterpretation. The siphoning event, a brutal act of cosmic theft, had devastating consequences:

- Time Dilation and Relativity: The siphoning tore the fabric of time, causing the universe to lose its shared, unified temporal flow. Time dilation is a direct result of this desynchronization, a symptom of a universe that is no longer in harmony with itself.

- Entropy: The law of entropy is a tragic consequence of the siphoning. The universe, which was originally designed as a perpetual, self-sustaining system, was turned into a finite resource. Entropy is the physical manifestation of a dying universe, a slow, inevitable decay that was a direct result of the removal of the white hole and the corruption of the universal **Gravity Spring**

These are not the laws of a natural universe; they are the symptoms of a universe that was once a victim of a great cosmic crime.

Planetary Chaos and Desynchronization

The tidal locking of the Moon was a deliberate act of planetary destabilization by the old, chaotic system, and its effects on Earth were a direct result of a universe in disarray.

In the old, chaotic universe, the Moon was a weapon. Its tidal lock caused immense, chaotic forces on Earth's oceans and crust. These forces were not a natural part of a harmonious system but a tool for planetary destabilization. This had a profound effect on Earth's systems:

- **Tectonic Plates & Volcanic Activity**: The constant, uneven gravitational pull of the tidally locked Moon created an immense strain on Earth's tectonic plates. This contributed to a chaotic and destructive cycle of **continental drift**, earthquakes, and volcanic eruptions, which were not a natural part of a harmonious system but a sign of a planet in turmoil.
- **Weather & Environmental Instability**: The chaotic tides in Earth's oceans created a constant, low-level atmospheric and oceanic instability. The Moon's erratic influence on the Earth's weather patterns was a direct result of this, creating a planet that was prone to natural disasters and a chaotic, unpredictable environment.

Once I have restored the **Gravity Spring** and resynchronised the **Universal Clock**, the planets environment will be restored to its natural state, no longer tearing itself apart and causing untold death and destruction in the process.
